

Session Note - March 10, 2026

Patient: Marcus Williams

Therapist: Dr. James Park, LCSW

Presenting Concerns:

Patient presents with moderate depression, reporting persistent low mood and anhedonia for the past three months. Reports that symptoms worsened after a recent job loss. Secondary concerns include social withdrawal and poor sleep. This is not a new concern.

Session Summary:

Conducted via telehealth video. Session focused on behavioral activation strategies to address withdrawal patterns. Reviewed activity log from the past week and identified avoidance behaviors. Patient committed to scheduling two pleasurable activities this week. Discussed relationship between inactivity and depressed mood.

Mood Assessment:

Current mood: 3/10 (low and unmotivated)

Mood change from last session: Declined

Energy level: Low

Emotional themes: sadness, hopelessness, loss

Affect observed: Flat

Affect congruence: Congruent

Mood variability: Stable

Mental Status Examination:

Appearance: Appropriate but somewhat disheveled

Behavior: Cooperative but withdrawn at times

Speech: Slow rate, low volume

Thought process: Linear but slowed

Thought content: Themes of worthlessness and loss

Perception: No abnormalities

Cognition: Intact

Insight: Fair - acknowledges depression but minimizes severity

Judgment: Fair

Risk Assessment:

Suicidal ideation: None. Self-harm: None. Homicidal ideation: None. Risk level: Low.

Interventions Used:

- Behavioral activation
- Motivational interviewing
- Psychoeducation about depression

Techniques somewhat effective - patient was engaged but expressed doubt about follow-through.

Skills taught: Activity scheduling, mood monitoring

Skills practiced: Identifying avoidance patterns

Homework assigned: Complete activity schedule and rate enjoyment for each activity

Previous homework: Not completed - patient reported too tired to engage

Medications discussed: Patient currently on sertraline 50mg. Discussed possible dose adjustment with psychiatrist.

Medication adherence: Partially adherent - missed doses on weekends

Diagnoses:

Primary diagnosis: Major Depressive Disorder, single episode, moderate

Primary diagnosis code: F32.1

Diagnosis status: No change

Treatment Progress:

Overall progress: Some regression since job loss

Treatment phase: Early

Barriers: Low energy, social isolation, job loss stressor

Strengths: Willingness to attend sessions, some awareness of patterns

Treatment goals: Increase daily activity level, improve mood, rebuild social connections

Goals addressed: Behavioral activation planning

Plan:

- Continue weekly sessions via telehealth
- Next session: March 17, 2026
- Focus: Review activity schedule results
- Referral made to psychiatrist Dr. Singh for medication review
- Level of care: Outpatient
- Discharge planning: Not planned
